

---

**Scientific Name:** *Juncus hallii* Engelm.

**Bibliographic Reference:** Engelm., 1866. Trans. Acad. Sci. St. Louis 2: 446.

**Common Name:** Hall's rush

**Family (Common Name):** Juncaceae (Rush Family)

**Synonyms:** None

**Idaho Native Plant Society Category:** State Review

**Natural Heritage Program Rank:** S2

**Distribution:** Bonneville, Clearwater, Fremont, Lemhi and Owyhee counties, Idaho; sw Montana, to Colorado and ne Utah.

**Habitat:** Dry, wet, boggy meadows, margins of ponds and lakes, and along streams, 1500-1900 m elevation.

**Phenology:** June through August.

**Look-alikes:** Similar to *J. parryi* but Hall's rush differs in having a retuse capsule, acute tepals 4-5 (5.5) mm long vs 5-7 mm long and smaller seeds (1 mm long vs 2 mm). The seed appendage at each end is fi the body length vs equalling or a little longer in Parry's rush.
